1 Постановка задачи

Цель работы: изучить принципы использования индексации данных.

1.1 Задание

Целью данной курсовой работы является разработка автоматизированной информационной системы для организации юмористических мероприятий. Основная задача разработки данной системы заключается в создании платформы, которая позволит площадкам удобно создавать мероприятия, приглашать артистов и управлять процессами организации, а артистам — находить подходящие мероприятия, просматривать их информацию и записываться на участие. Система призвана упростить взаимодействие между организаторами и артистами, сделав процесс планирования и участия в мероприятиях более прозрачным и удобным. Перед началом разработки необходимо определить перечень правил и требований, описать будущих пользователей системы и их роли, а также детализировать алгоритмы их взаимодействия с системой.

2 Выполнение работы

Для выполнения работы был выбран бекенд фреймворк Ktor и фронтенд фреймворк Flutter.

2.1 Возможности бизнеса

Создание приложения для управления конференциями открывает значительные возможности для улучшения взаимодействия между организаторами и участниками. Система должна упростить процесс регистрации, предоставлять актуальную информацию о мероприятиях и обеспечивать удобный канал связи между всеми заинтересованными сторонами.

2.2 Бизнес-цели

Основные задачи, которые система призвана решить:

- Неэффективность процесса регистрации на конференции: отсутствие унифицированного подхода затрудняет процесс для участников и организаторов.
- Нестабильная коммуникация: это приводит к недопониманиям и задержкам в обмене важной информацией.
- Недостаток доступа к актуальной информации: затрудняет планирование и снижает удовлетворённость участников.

Для решения этих проблем установлены следующие бизнес-цели:

- БЦ-1: Унифицировать процесс регистрации на конференции, обеспечивая простую и интуитивно понятную навигацию.
- **БЦ-2**: Улучшить качество и скорость взаимодействия с пользователями через надежные и удобные каналы связи.
- **БЦ-3:** Предоставлять доступ к полной и актуальной информации о мероприятиях, помогая пользователям принимать быстрые и обоснованные решения.

2.3 Критерии успеха

Для оценки успешности внедрения приложения определены следующие критерии:

- КУ-1: Более 100 созданных конференций в день.
- **КУ-2:** Сохранение рейтинга приложения выше 4.5 на основных платформах (App Store, Google Play) как показатель высокой удовлетво-

ренности пользователей.

Эти цели и критерии направляют развитие приложения, способствуя улучшению взаимодействий на конференциях и повышая удовлетворенность всех участников процесса, от организаторов до посетителей.

2.4 Положение о концепции проекта

Для организаторов конференций и участников, желающих принять участие в мероприятиях, предлагаемая система «Конференции» является информационной системой, которая обеспечит единую платформу взаимодействия. Это позволит сторонам своевременно получать необходимую информацию друг о друге и значительно упростит процесс регистрации и участия. Система будет включать профили участников и организаторов с важной информацией, включая наличие свободных мест и программу мероприятий. В отличие от существующих каналов, наш продукт специализирован для этой сферы и предоставляет все необходимые инструменты для удобства пользователей конференций.

2.5 Бизнес-риски

- **БР-1:** Организаторы могут не захотеть менять привычные каналы взаимодействия (вероятность – 0.3, ущерб – 7).
- **БР-2:** Возможные сбои в работе приложения могут сорвать ключевые мероприятия и подорвать доверие пользователей (вероятность -0.1, ущерб -9).

2.6 Предположения и зависимости

- Пр-1: Организаторы и участники будут иметь доступ к системам с соответствующим интерфейсом для взаимодействия и регистрации.
- **Пр-2**: Несколько представителей организаторов будут иметь доступ к системе для повышения скорости отклика и эффективного общения с участниками.
- Зав-1: Система должна быть независимой от конкретных устройств, на которых она установлена.
- Зав-2: В зависимости от того, кто пользуется системой, её функции и интерфейс должны адаптироваться соответственно, обеспечивая персонализированный опыт для организаторов и участников.

2.7 Требования к системе

2.7.1 Определение требований пользователей

2.7.1.1 Определение списка пользователей

Таблица 2.1 - Список ролей

Роль	Описание	
Участник	Целью участника является поиск и	
	регистрация на интересные ему конференции.	
	Участник может просматривать список	
	мероприятий, их расписания и профили	
	организаторов. Он также имеет возможность	
	зарегистрироваться на конференции, отменить	
	регистрацию при необходимости и	
	редактировать свой личный профиль.	
Организатор конференции	Организатор отвечает за создание и	
	управление конференцией. Его цель –	
	организовать успешные мероприятия и	
	привлечь участников. Организатор может	
	добавлять и редактировать мероприятия,	
	управлять списком участников и	
	взаимодействовать с ними посредством	
	уведомлений. Он также может редактировать	
	профиль своей конференции.	

2.7.2 Сценарии пользования

Конечно, давайте представим ошибочные и альтернативные сценарии в указанном формате:

2.7.3 Ошибочные сценарии

- 1. Проблемы с загрузкой списка конференций
 - 1.а) Приложение пытается загрузить список конференций.
 - 1.b) Если интернет-соединение отсутствует, приложение отображает сообщение: "Не удалось загрузить конференции:

Проверьте интернет-соединение и попробуйте снова".

• 1.с) Если произошла серверная ошибка, приложение выдает сообщение: "Ошибка сервера: Попробуйте повторить чуть позже".

2. Сбой при записи на конференцию

- 2.а) Участник нажимает кнопку «Записаться» на странице конференции.
- 2.b) Если запись не удалась из-за проблемы с сервером, приложение отображает сообщение: "Запись не выполнена: Попробуйте снова через некоторое время".
- 2.с) Если произошла другая ошибка, пользователь видит сообщение: "Произошла ошибка: Проверьте подключение и статус конференции".

3. Попытка записи на уже записанную конференцию

- 3.а) Участник нажимает кнопку «Записаться» на конференции, на которую уже зарегистрировался.
- 3.b) Приложение отображает уведомление: "Вы уже зарегистрированы на эту конференцию".

2.7.4 Альтернативные сценарии

1. Отмена записи на конференцию

- 1.а) Участник желает отменить свою регистрацию на конференцию.
- 1.b) Участник возвращается на экран конференции и нажимает «Отменить запись».
- 1.с) Приложение отображает подтверждение отмены: "Ваша запись отменена", и обновляет статус конференции.

2. Фильтрация списка конференций

- 2.а) Участник хочет увидеть только конференции, проводимые в определенные даты.
- 2.b) Участник задает фильтр по дате через соответствующий интерфейс.
- 2.с) Приложение обновляет и показывает отфильтрованный список конференций.

2.7.5 Функциональные требования

Таблица 2.2 - Функциональные требования

Функциональное требование	Шаги и описание
ПросмотрСпискаКонференций	Участник открывает приложение и
	видит список доступных
	конференций.
ПросмотрИнформацииОконференции	Участник нажимает на
	конференцию из списка.
.ПросмотрДеталей	Приложение отображает
	подробную информацию о
	конференции: название, дата,
	время, местоположение и
	описание.
ЗаписьНаКонференцию	Участник нажимает кнопку
	«Записаться» на странице с
	информацией о конференции.
.ПодтверждениеЗаписи	Приложение подтверждает
	успешную запись и обновляет
	статус конференции для
	участника.
ОтменаЗаписиНаКонференцию	Участник возвращается на
	страницу конференции и
	нажимает «Отменить запись».
.ПодтверждениеОтмены	Приложение подтверждает отмену
	и обновляет статус конференции
	для участника.
ФильтрацияСпискаКонференций	Участник выбирает фильтр по дате
	через интерфейс.
.ОбновлениеСписка	Приложение обновляет и
	показывает отфильтрованный
	список конференций.

Функциональное требование	Шаги и описание
ОшибкаЗагрузкиСписка	При возникновении ошибки,
	приложение отображает
	сообщение об ошибке и
	предлагает повторить через
	некоторое время.
ОшибкаЗаписиНаКонференцию	Если запись не удалась,
	приложение отображает
	сообщение об ошибке и
	предлагает попробовать повторить
	операцию позже.
ПроверкаПовторнойЗаписи	Участник пытается повторно
	записаться на конференцию, на
	которую уже зарегистрировался.
.ОтображениеПредупреждения	Приложение отображает
	уведомление: "Вы уже
	зарегистрированы на эту
	конференцию".

2.8 Модель базы данных

Таблица 2.3 - Словарь данных

Таблица	Поле	Тип данных	Описание
Users	username	VARCHAR(255)	Уникальное
			имя пользо-
			вателя
	password_hash	VARCHAR(255)	Хэш пароля
			пользовате-
			ЛЯ
	token	VARCHAR(255)	Токен для
			сессии
			пользовате-
			ЛЯ

Таблица	Поле	Тип данных	Описание
Cities	id	INT	Уникальный
			идентифи-
			катор
			города
	name	VARCHAR(255)	Название
			города
Topics	id	INT	Уникальный
			идентифи-
			катор темы
	name	VARCHAR(255)	Название
			темы
Conf	id	INT	Уникальный
			идентифи-
			катор
			конферен-
			ции
	name	VARCHAR(255)	Название
		,	конферен-
			ции
	city_id	INT	Ссылка на
	<i>-</i>		город
	topic_id	INT	Ссылка на
			тему
	author username	VARCHAR(255)	Имя пользо-
	_	,	вателя
			автора
	start_date	DATE	Дата начала
	_		конферен-
			ции
	end_date	DATE	Дата
	_		окончания
			конферен-
			ции
			

Таблица	Поле	Тип данных	Описание
	description	TEXT	Описание конферен-
			ции
	contacts	TEXT	Контактная
			информация
	image_url	VARCHAR(255)	URL изоб-
			ражения

2.8.1 Процедуры

Процедура **RegisterNewUser:** Использует входные параметры new username, new password hash и new token для регистрации нового пользователя в системе конференций. Процедура сначала проверяет, существует ли уже пользователь с указанным именем пользователя, извлекая текущий токен из таблицы Users. Если пользователь уже зарегистрирован, процедура возвращает существующий токен в выходной параметр resulting token, указывая на то, что пользователь уже существует. В случае, если пользователь с таким именем не найден, процедура добавляет новую запись в таблицу Users с предоставленными именем пользователя, хешем пароля и токеном. После успешной регистрации возвращает новый токен через выходной параметр resulting token, подтверждая успешное создание учетной записи и регистрацию пользователя.

2.8.2 Тригеры

Триггер after_conference_insert: автоматически выполняется после добавления новой записи в таблицу Conferences. Этот триггер предназначен для автоматического добавления автора конференции в список участников этой же конференции. После успешного выполнения INSERT-запроса в таблицу Conferences, триггер вставляет новую запись в таблицу ConferenceAttendance, используя имя пользователя автора конференции (NEW.author_username) и идентификатор конференции (NEW.id).

2.8.3 Индексы

- 1. **Индекс idx_users_token:** Создан для оптимизации поиска по столбцу token в таблице Users, что ускоряет операции проверки аутентификации.
- 2. **Индекс idx_conferences_city:** Улучшает производительность запросов по столбцу city_id в таблице Conferences, позволяя быстрее фильтровать конференции по местоположению.
- 3. **Индекс idx_conferences_topic:** Ускоряет операции поиска и фильтрации по столбцу topic_id в таблице Conferences, упрощая работу с темами конференций.
- 4. **Cocтавной индекс idx_users_username_email:** Обеспечивает быстрое выполнение запросов, которые фильтруют данные по username и email одновременно в таблице Users.
- 5. **Cocтaвной индекс idx_conferences_date_location:** Улучшает производительность запросов, фильтрующих конференции по event_date и city_id, оптимизируя сортировку по дате и расположению в таблице Conferences.

2.9 Описание работы интерфейса

На этом экране пользователь видит форму для входа в систему. Она содержит поля для ввода имени пользователя и пароля, а также кнопку для подтверждения входа. Этот интерфейс обеспечивает безопасную авторизацию, после которой пользователи получают доступ к функциональности приложения, включая просмотр и управление конференциями.

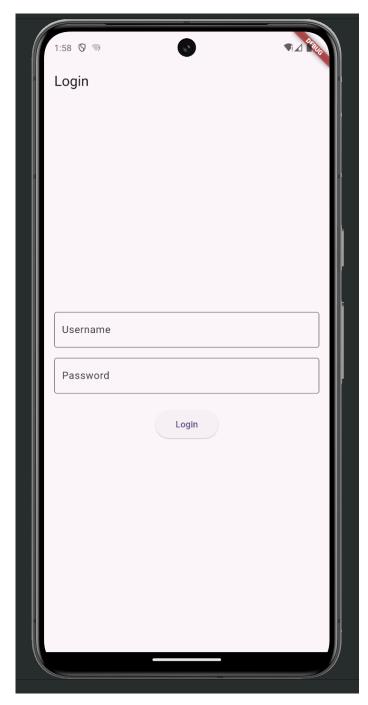

Рисунок 2.1 - Форма логина

Этот экран представляет собой основной список всех доступных конференций, доступных для пользователя. Здесь можно увидеть основную информацию по каждой конференции, включая название, дату и тему. Экран также предоставляет возможность быстрого доступа к детальной информации о каждой конференции посредством простого нажатия на соответствующую строку в списке.

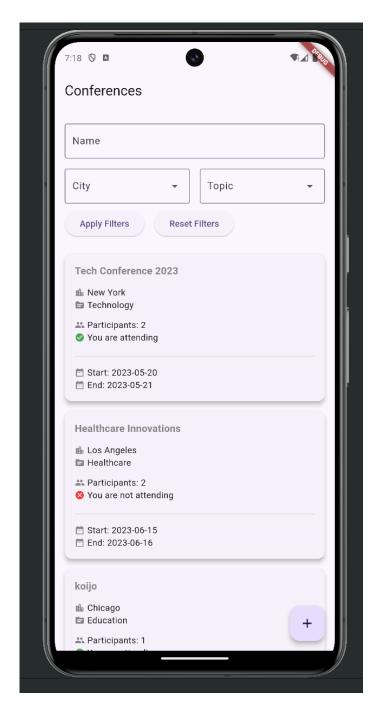

Рисунок 2.2 - Список конференций

На данном экране пользователи видят полную информацию о выбранной конференции. Блоки данных содержат детали, такие как даты проведения, местоположение, описание и контакты организаторов. Интерфейс также предлагает операции редактирования и удаления конференции, если они разрешены для текущего пользователя.

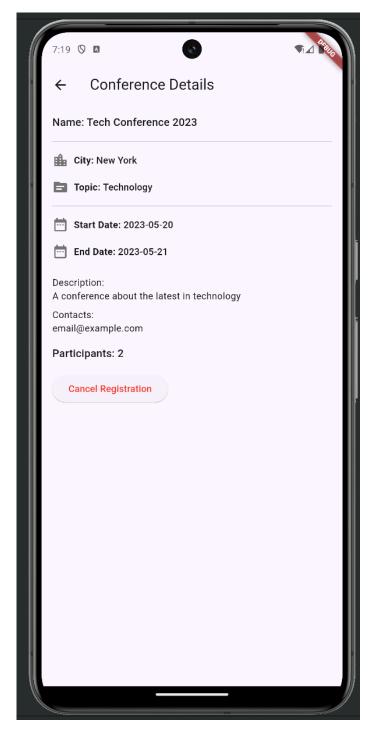

Рисунок 2.3 - Информация о конференции

Этот экран демонстрирует окно настройки фильтрации списка конференций. Пользователь может выбрать параметры фильтрации, такие как даты, тема или город, чтобы сузить отображаемый список конференций. Этот функционал помогает пользователям быстро находить и получать доступ к наиболее релевантным для них конференциям.

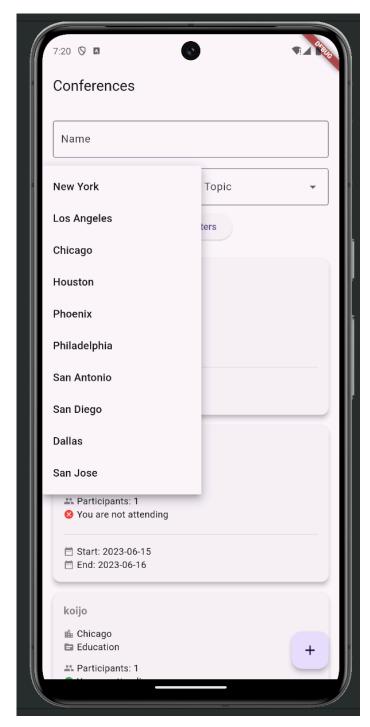

Рисунок 2.4 - Настройка фильтрации

После настройки фильтров пользователь возвращается на основной экран со списком конференций, где теперь отображаются только те конференции, которые соответствуют установленным критериям. Это подчеркивает удобство использования и персонализацию отображаемого контента.

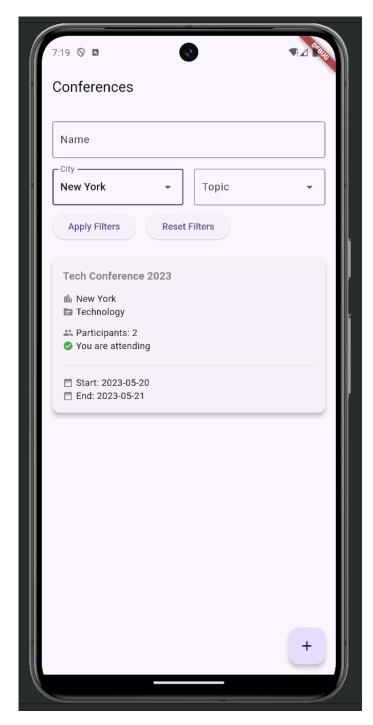

Рисунок 2.5 - Применение фильтрации

Этот скриншот показывает диалоговое окно, появляющееся в ситуации, когда происходят ошибки, например, при авторизации или подключении к базе данных. Диалог содержит сообщение об ошибке и инструкции по устранению проблемы, а также кнопку для закрытия окна. Такое окно позволяет пользователям быть в курсе возможных проблем и предпринимать соответствующие действия для их решения.

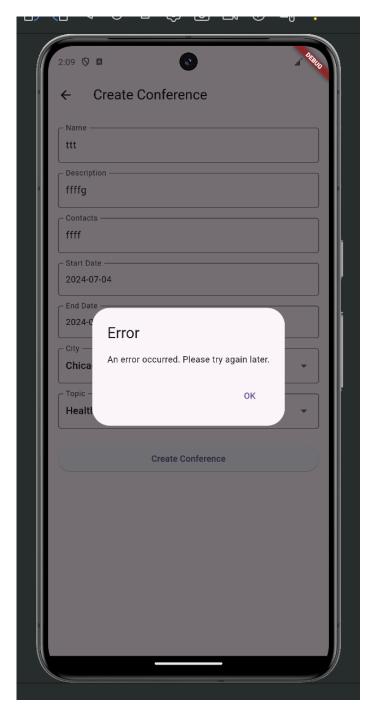

Рисунок 2.6 - Диалог об ошибке

Экран создания конференции разработан с целью облегчения и упрощения процесса планирования новых мероприятий. Пользователь может ввести основную информацию о конференции, включая название, описание, дату и время проведения, а также место. Такой интерфейс способствует быстрой и удобной настройке параметров мероприятия, обеспечивая интуитивно понятный процесс, который минимизирует время на создание событий и снижает вероятность ошибок.

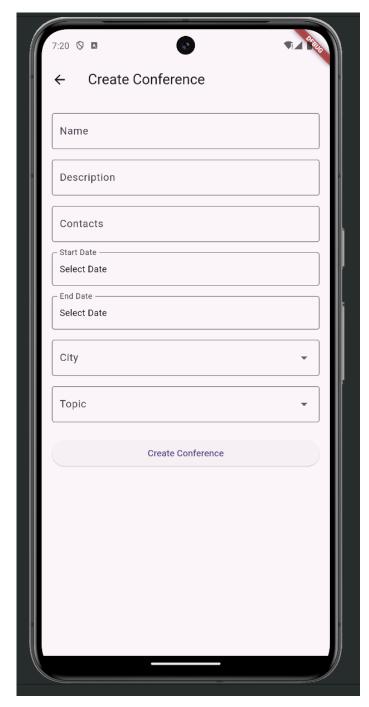

Рисунок 2.7 - Экран создания конференции

Приложение также поддерживает веб-версию, что позволяет пользователям взаимодействовать с системой через браузер. Это обеспечивает большую гибкость, независимо от используемой операционной системы или устройства. Такая функциональность предоставляет участникам и организаторам мероприятий возможность легко получать доступ к данным, управлять регистрациями и обмениваться информацией, находясь в любом месте с подключением к интернету.

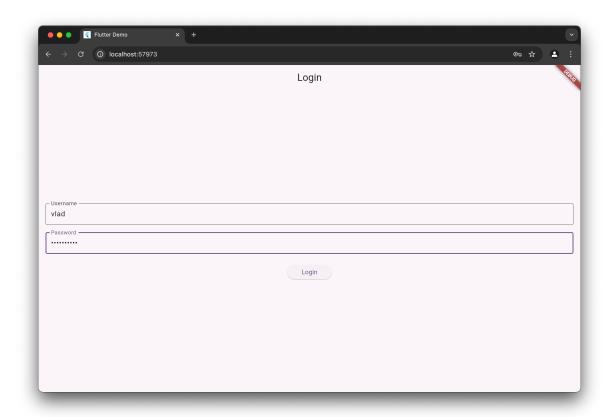

Рисунок 2.8 - Экран логина в веб-версии

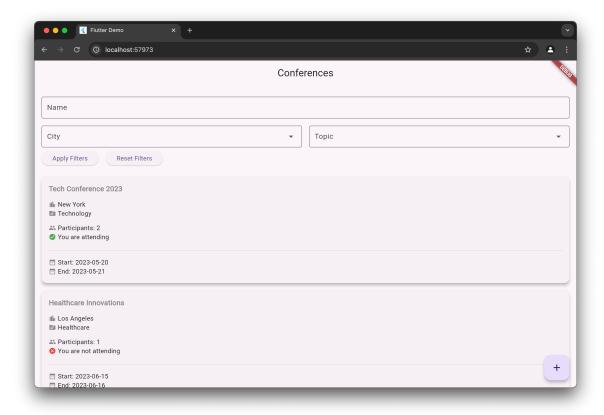

Рисунок 2.9 - Список конференций в веб-версии

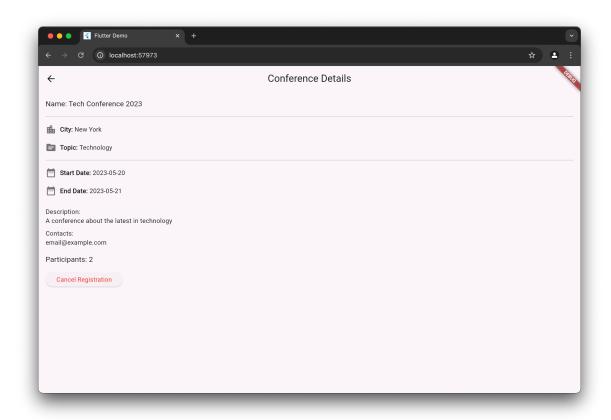

Рисунок 2.10 - Информация о конференции в веб-версии

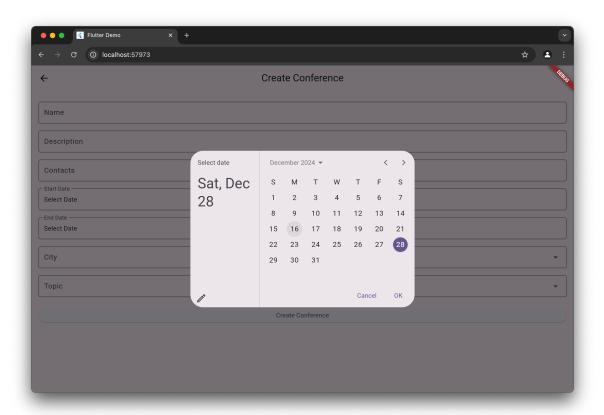

Рисунок 2.11 - Экран создания конференции в веб-версии

ЗАКЛЮЧЕНИЕ

В процессе курсовой работы была разработана автоматизированная информационная система для управления конференциями, используя фреймворки Кtor и Flutter. Основной целью проекта стало создание современного и функционального программного продукта, который обеспечивает удобство не только в организации мероприятий, но и в регистрации участников на них. Роли пользователей были четко определены, а также проработаны функциональные и технические требования системы. Использование Кtor для серверной части и Flutter для разработки кросс-платформенных мобильных приложений позволило создать надежную и эффективную систему, готовую к практическому применению и обеспечивающую поиск и фильтрацию конференций.

Итоговый код доступен в Приложении и на GitHub (URI - https://github.com/vladcto/suai-labs/tree/main/7_semester/MCПИСИТ/34).
